

Dear FCC

RM-10867 is the best proposal for restructuring of ham licence, this allows all involved to get better involved into the radio spectrum. I know that morse code is important in an emergency, but it should be the option of the ham to be involved or not. Also there are many who can not or are unable to learn morse code that be of importance to emergency communications in other ways. RM-10867 would deffinatly bring more people into ham radio and encourage upgrading. Each of the bands should have a small section for lower licence to come to for mentoring and encouragement of the upper licence to upgrade.

Sincerly

Mark Hutchens
